

**USE OF MODERN PEDAGOGICAL TECHNOLOGIES IN PHYSICAL EDUCATION
AND SPORTS LESSONS**

Pardaev Bakhrom Pulatovich

Senior Teacher at the Institute for Retraining and
Professional Development of Physical Education and Sports Specialists, Tashkent**Abstract:**

The article discusses the importance of the use of modern pedagogical technologies in physical education and sports lessons, some recommendations on the formation of worldview and thinking, the formation of physical, spiritual, and moral qualities.

Keywords: sports, pedagogical technologies, methods, criteria, practical lessons.

Introduction

The idea of national independence that is being formed in the independent Republic of Uzbekistan is to establish a humane, democratic, legal state and society, as well as to raise it to higher levels of socio-economic and cultural development, to take a worthy place in the ranks of the world community. serves to realize the directed noble goals. The positive result of these goals is first the effective organization of educational and educational work to teach the young generation the basics of scientific knowledge, to create a broad outlook and scope of thinking in them, and to form physical, spiritual and moral qualities. depends on doing. After all, creating a bright perspective of the country, spreading its name to the world, showing the national and cultural heritage created by the great ancestors to the society, enriching them, ensuring that the independent Republic of Uzbekistan occupies a place among the developed countries, makes the young generation a perfect person in all respects and a qualified person. depends on training as a specialist. Teachers should be prepared for conducting training, using various educational tools effectively, and should reveal the methodology of the curriculum and programs, integrating the teaching methods. However, it should not be forgotten that management of teaching and learning processes, effective use of existing educational tools and ensuring that the educational activities are as useful as possible to students, and many other similar tasks is fully charged to the teacher. The use of new pedagogical technologies in the teaching of subjects; the teacher is responsible for teaching and learning, as well as for the effective use of available opportunities and conditions. To fulfill this task, the teacher must fully know the teaching process and the scientific and technical aspects of the taught subjects. The purpose of this is that the teaching method should be developed in such a way that the students can fully master the subject being taught.

Literature Analysis and Methods

When determining whether teaching methods meet the needs of students, the teacher should consider the following six main components of his program:

1. Planning
2. Opportunity and conditions
3. Styles

4. Activities

5. Feedback

6. Control

One way to determine your teaching style is to make a list of questions that address each of the six factors listed above. It should be noted that ensuring the full fulfillment of the requirements of each component and following it increases the effectiveness of the chosen teaching method.

Planning: Teaching methods include the following, namely:

- analysis of qualifications and main goals.
- composition of the group.
- necessary qualifications.
- subjects to be studied.
- motivating factors for learning.
- learning types and opportunities.
- educational material and its relevance to the times; the need to summarize experiences in identifying problems and finding solutions.
- the need for methods of presenting educational material.

The following conditions must be met for study:

- classrooms.
- educational tools.
- audio-video materials.
- various models and equipment.
- model weapons for practical training.
- assignments and tasks related to the topic.
- group or individual teaching methods.
- assessment materials.

Styles: The teacher should be aware of the following teaching methods:

- teaching and giving instructions on how to perform the work.
- teaching using special computer programs.
- lecturing and teaching.
- demonstration and experiment.
- work on a project basis.
- use of algorithms and different analysis methods.
- study of the situation.
- role-playing, discussion, and motivation exercises.
- teaching with the help of a computer.

Which of the following teaching methods is most effective?

- lecture.
- independent work.
- training based on audience demand.
- individual training.
- creating an opportunity to gain work experience.

- the ability of the teacher to be not only a distributor of knowledge, but also a supplier so that the listener can absorb this knowledge.
- organization of evaluation system.
- quick establishment of feedback between teachers and students. In order to develop a suitable teaching and learning program based on the criteria defined above, the teacher must be able to:
- having actual teaching skills.
- to explain the criteria for determining the established norms for assessing the level of knowledge of students.
- determining the suitability of teaching methods for students.

Results

Methods and means of increasing the effectiveness of using modern pedagogical technologies in physical education and sports lessons. Today, physical education teachers, like all pedagogues, are required to use advanced pedagogical technologies such as organizing lessons based on modern pedagogical requirements, using innovative approaches to the lesson, teaching students to think independently during the lesson. Interactive method - by increasing the activity between students and the teacher in the educational process, it serves to activate the acquisition of knowledge and personal qualities of students in physical education and sports activities.

Discussion

Interactive (interactive) is an English word, "interact" means "inter", mutual, "act" means "to act". In general, "interactive" means to interact. differences between non-traditional and interactive lessons

1. When teaching the subjects of the curriculum, it is necessary to consider which subjects it is appropriate to organize interactive lessons. This involves the use of interactive or traditional types of training that ensure the full achievement of the purpose of the training on one subject.
2. For the interactive training to be effective, it is necessary to ensure that the students know the basic concepts and preliminary information on its topic before the new training.
3. It is necessary to consider that more time is spent on the independent work of students in interactive training than in traditional training. Interactive education method is implemented by each teacher at the level of available tools and capabilities. A physical education teacher can increase their knowledge and learning activity only if he knows the level of certain conditions of students. For this purpose, students should be able to prepare for the interactive training session, master the topic, and be prepared for the training session, be able to discuss the text read or listened to during the lesson, creative, practical they need to easily perform character tasks. The educational process is not only a process controlled by the teacher, but also closely connected with the students' activities. The learning process is activated because of the student's self-management. In physical education and sports lessons, the student can control his own behavior, identify, and eliminate his mistakes, draw conclusions independently, participate in the performance of reproductive, partial research and creative tasks, increases student activity and effectively affects its implementation.

The advantage of using interactive methods in theoretical and practical lessons of physical education and sports:

1. In-depth learning of topics by students.
2. Ease of supervision of students by the teacher.
3. Students get more information in a short time
4. Maximum development of students' skills and competencies.

Conclusion

In conclusion, it can be said that interactive education provides an opportunity to solve several problems at the same time. The main of these is that the communication skills and abilities of the students are developed, it helps to establish emotional relationships among the students, and the fulfillment of educational tasks by teaching them to work as part of a team, to listen to the opinions of their peers. provides.
